Based on the mature multi-model database PostgreSQL, the EDB Postgres™ Platform allows customers to develop new applications for digital business, modernize existing applications, replace legacy DBMSs and support cloud initiatives.

EnterpriseDB® (EDB™) leverages the advantages of open source, including significant cost savings, and introduces EDB Postgres as a new datacenter standard.

As a reliable partner to more than 3,500 customers, EDB provides enterprise database options, mission-critical tool suites, flexible deployment options and services and support to enable customers to run Postgres responsibly at scale.

Highlights

Minimal risk

The EDB Postgres Platform aims to deliver an integrated offering for all enterprise database needs. EDB's features, tool suites, deployment options, and expertise allow customers to boost their productivity, accelerate time to value, and control cost.

Free budget

EDB's software engineering team leverages open source technology to

deliver an affordable enterprise-class database platform allowing customers to transform their DBMS. Freed financial resources can be invested to drive new digital initiatives.

DevOps

EDB Cloud Management provides customers with self-service infrastructure and database provisioning for public and private clouds giving developers a Database-

as-a-Service (DBaaS) while allowing DBAs and IT management to retain visibility and control over database and resource utilization.

Agile development

EDB Postgres supports traditional relational as well as non-relational data models including document and key-value data types to support modern software development.

Enterprise-Ready Database Platform with Full Service Offerings

At the heart of the EDB Postgres Platform customers will find a mature DBMS with relational and non-relational capabilities to support diverse workloads from traditional OLTP and reporting workloads, to key-value and document databases.

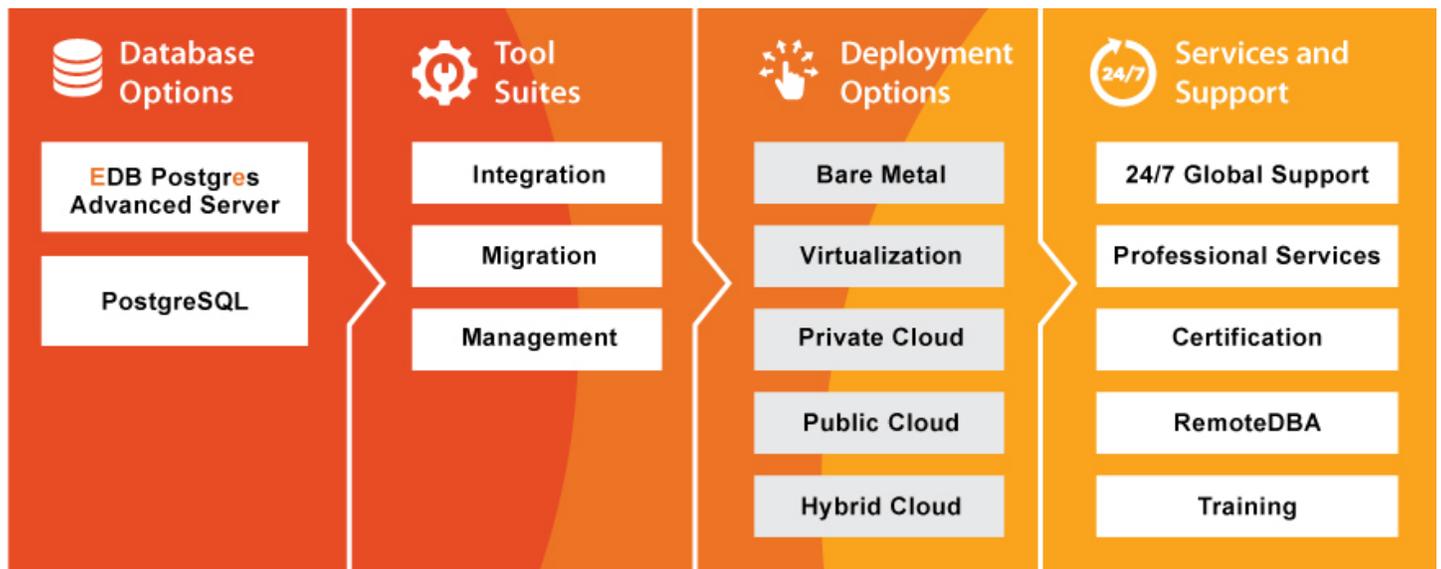

Customers can choose between a hardened version of open source PostgreSQL and EDB Postgres Advanced Server with improved performance, enterprise security, compatibility for Oracle®, and DBA and developer productivity features.

While the **Management Suite** provides mission-critical tools for database infrastructure monitoring, tuning, high availability and disaster recovery, the **Integration Suite** allows enterprises to build a data platform across multiple data sources including traditional DBMSs and new data

stores, providing a holistic view of data. The **Migration Suite** facilitates schema and data migrations to EDB Postgres.

The platform's flexible deployment options include **bare metal, virtualization** and containers; and private, public, and hybrid **cloud** allowing customers to easily integrate EDB Postgres into their existing infrastructure or move instances across deployment options.

The EDB Postgres Platform is complemented by a portfolio of **professional services** offerings, 24/7 global mission-critical **support, remote DBA services, and training and certification** helping customers to get the best value out of their Postgres deployments.
